Screening for kidney diseases
- Liver function tests
Activity of the liver
Normal functioning of liver to break down toxic substances
Signs of any infection of the liver
- Lipid profile
Cholesterol – assessing the risk of heart disease
- Glucose
Screening for diabetes

Continues on page two

Our nurses will perform an Electrocardiogram (ECG) which records the electrical activity of the heart. This test is used to indicate any cardiac rhythm problems and help diagnose cause of symptoms such as palpitations or chest pain. It can also indicate any ischemic cardiac disease.

Following these tests, the patient will spend time with the Doctor, who will take a detailed medical history, current medical problems, risk factors for diseases and illness, medications review, family history review of risk factors, lifestyle activities, detailed body systems review. The doctor will then carry out a comprehensive medical examination.

Our Physical Health Lead and Nutritionist will work with the patient to analyse diet and nutritional status, to focus on aims and goals, to advise and formulate an exercise and nutritional plan to reduce unhealthy aspects of the body.

Working together with diet advice and practical lifestyle assistance to achieve:

- Improved fitness
- Health toned body
- Weight loss or gain
- Improved functional strength
- Improved posture
- Stress reduction
- Improved self confidence
- Increased well being

The key focus on nutrition is to:

- A complete review of your current nutrition intake
- To work with you to provide the true factors of body weight control
- To explain the diet minefield – what works and why
- Food supplements – what works and why
